

Assignment 12.1

Introduction To Spark

1. What is in-memory processing in Spark?

- a) Processing data in each node
- b) Storing data in RDBMS during processing
- c) Maximum effective utilization of RAM during the processing
- d) Using more no of CPU threads

Ans :- C. Maximum effective utilization of RAM during the processing

2. What are the features of Apache Spark?

- a) In-memory processing
- b) Ease of use APIs
- c) Unified high level tools
- d) Runs Everywhere (Hadoop, Mesos, standalone, or in the cloud. It can access diverse data sources including HDFS, Cassandra, HBase, S3.)
- e) All the above
- f) None of the above

Ans:- e. All the above

3. Apache Hadoop is more active project than Apache Spark in open source community in the last year.

- a) true
- b) false

Ans:- b. False

4. Driver program will be launched in every node of the worker.

- a) true
- b) false

Ans:- a. True

5. Spark only supports Stream processing.

a. Yes

b. No

Ans : - b. No
